

Lobster Elite Battery Tennis Ball Machines

Lobster Elite Ball Machine

The Lobster Elite battery operated ball machine introduced in 2003 sets a new standard for battery ball machines.

The ball speed can be varied from 13 - 68 mph with variable topspin/underspin and ball interval from 2.5 - 12 seconds. The ball hopper holds 175 balls, reversing over the machine body for storage and removable with the handle for car boot storage. The towing handle allows quick re-location on court, easy transport over uneven ground and can be used to climb/descend small steps with a hopper full of balls. The weight of the machine is 28kg.

The continuous running time of over 4 hours from a fully charged battery allows 4 - 8 hours use on court if ball pick-up time is included. A superior British 3-state charger is supplied, indicating full charge preserving battery life. If connected during use the machine will run all day.

The Elite 1 features a wide side to side oscillation angle so balls can be set to bounce within the full width of the singles court. The vertical ball path can be set to skim the net, give great ground strokes, or high lobs up to 55 degrees.

The Elite 2, introduced in 2005 also offers the same side to side oscillation feature, but in addition the internal rotating wheels that fire the balls can be set to move back and forth, so placing the balls on a line up and down the court. These two oscillations can be used separately, but both operating together, referred to as the unique 'triple oscillation', creates a random pattern of shots with variation in direction and depth. This means that you way either make the machine swing to fire on a line left to right, or on a line up and down, or both together creating a totally random shot pattern.

The Elite 3, introduced in the middle of 2005 is as the Elite 2 but with a triple and 2 line oscillator. The Elite 3's triple oscillator creates a random pattern of shots with variation in direction and/or depth. This means that you way either make the machine swing to fire on a line left to right, or on a line up and down, or both together creating the random shot pattern.

The 2-line oscillator will provide the same shot in an alternating, single-shot feed to forehand and backhand at short interval.

(Although using this feature will not override the Vertical oscillator, it is not recommended to combine them as the two are not designed to work effectively together in a synchronised fashion).

Almost maintenance free the Elite provides a challenge for advanced players but can tamed for use with young children using regular or transition balls. A remote control version of both type of machine is also available.

All Lobster machines carry a standard 2 year guarantee, but a full servicing, spares and repair service is available if and when it may by required.

- TE185 Lobster Elite 1 with British charger
- TE186 Lobster Elite 1 with charger and wireless remote control
- TE175 Lobster Elite 2 with British charger
- TE176 Lobster Elite 2 with charger and wireless remote control
- TE177 Lobster Elite 3 with British charger
- TE178 Lobster Elite 3 with charger and wireless remote control
