WET POUR IMPACT ABSORBING SURFACING

KEY TO GRAPHIC

- A Existing surround - grass, bitmac, concrete
- B Concrete edgings haunched with concrete (or treated timber edgings with pegs)
- C 15mm thick porous polyurethane & rubber crumb 'wearing course'
- D Rubber crumb with binder 'base course'
- E Minimum 100mm - MOT Type 1
- F Sub-soil

COMPLIANT WET POUR is a continuous, in situ impact absorbing surfacing primarily designed for children's play areas. Strong, durable and low maintenance, **Compliant Wet Pour** can be laid onto any size or shaped area, including around existing play equipment. **Compliant Wet Pour** is fully tested to BS.EN 1177 with fall heights of up to 3.2 metres. Copies of the full test results including extra tests for elongation and tensile strength are available upon request.

The standard system consists of a variable depth bulk layer of black reclaimed SBR rubber topped with a 15mm nominal thickness of bound EPDM rubber crumb. There is a wide variety of eye-catching colours and inlaid designs to choose from. For most new developments, the surface is laid onto a recessed stone base as illustrated. For best value, this base preparation can be carried out by the client. **Compliant Wet Pour** can also be laid onto existing hard surfaces.

Also available within our COMPLIANT range are prefabricated **Compliant Play Tiles** and **Compliant Grow Through Tiles**. For full details on these and for full technical data on **Compliant Wet Pour** look at our website www.sportsequip.co.uk.
